The Path Leads UT

The Elementa UT project is a series of objects developed with Scandinavian designers and artists - to remind us that we are always in nature, even so in our interiors.

Interfacing Nature with Elementa UT

The winter season can seem unending in Norway. Hallgeir Homstvedt has designed the Ki, a minimalist lamp that will keep both your plants and yourself happy and thriving the whole year.

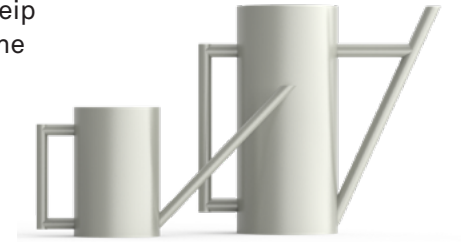

The Klorofyll Planter System features terracotta pots in coaction with robust metal framework. Designed by Anderssen & Voll, the system is made to explore interior landscaping - and to bring awareness about the primacy of soil for life, indoors and outdoors.

The Derive by Emma Staubo & Jomi Evers is a Boundary Being that has emerged from the field where the forest meets the digital realm. Just touch the Derive gently to allow yourself to drift into a lush soundscape transmitted from a listening station placed deep into a Norwegian forest.

The Ur water cans are created by the Norwegian art, craft and design studio Kneip - with the intention to gracefully elevate the ritual of sharing water with plants.

Lövaman by Swedish artist Roberto Peyre is a series of special performances curated by Elementa. Sooner or later Nature is going to change all of us into Herself. The Lövaman runs her errands.

New UT projects coming up:

The Bakka - a superbly handcrafted longbow by Norwegian bowmaker Håkon Felberg
+
Treetop Dwelling - architectural experiments in living and working in the trees - by Blakstad Haffner Architects.

UT landscape with the Ki light by Hallgeir Homstvedt, the Ur Watercan by Kneip & the UN Divided plant shelf by Jonas Stokke & Øystein Austad.

Move the Derive to transmit real-time sound from a secret place in an ancient forest in Norway.

Design by Emma Staubo & Jomi Evers
– developed by Elementa and Brutal.

Lövaman Oslo

Performance
by Roberto Peyre

The elements of the Klorofyll Planter System are infinitely interchangeable to produce living interior landscapes.

Design by Anderssen & Voll

A person wearing a white long-sleeved shirt and black leggings is performing a handstand in a field. Their legs are extended straight up into the air. The foreground is filled with numerous tall, green, columnar cacti. The background consists of dark, rocky terrain with some sparse, dry vegetation.

A long time collaborator with Elementa, the Information Psychologist is one of the dancers of the The Molecular Ballet.

The Molecular Ballet is an Oslo-based art group working to produce an experimental symbol system through collecting images from 256 artists, architects, thinkers, musicians and others.
